

Good evening everyone. We are Team USBHub also known as team six. I am Krystal Sandez, (point to other team members to say their name)

The topic we choose for our project is around gun violence across America.

Why Gun Violence?

- We each have had our own experiences to how gun violence has impacted and shaped people's lives
- Do you know of someone who has been affected by gun violence, whether it be a relative, friend, or co-worker?
- From social media, news outlets, and from our experiences, we all may have misconceptions about the topic and wanted to understand from data if our perceptions hold truths or were misleading

So why did we choose gun violence? In our team discussion, we found commonality that we each have had our own experiences to how gun violence has impacted and shaped people's lives here in America. We ask ourselves and to you our audience, do you know of someone who has been affected from gun violence whether they be a relative, friend or coworker?

When we think about this topic, we wondered from social media, news outlets or from our own experiences, that we may all have misconceptions around gun violence and we wanted to understand from data, if our perceptions hold any truths or could have been misleading from these sources.

Sources

- Stanford Geospatial Center: dataset on mass shootings
<https://github.com/StanfordGeospatialCenter/MSA>
- Non-Profit: Gun Violence Archive
<http://www.gunviolencearchive.org/reports>
- USA Census Data: American Community Survey 1-Year Estimates
<https://www.census.gov>
- State Policy Database: Ruger & Sorens Database of State and Local Public Policies and Policy Ideology Indices
<http://www.statepolicyindex.com/data>

With that we combed through the internet with its abundance of information and chose the following sources to answer some of our questions.

Sources used is first a dataset on mass shootings from Stanford Geospatial Center, an organization that conduct their own datamining. Second, a non-profit organization called Gun Violence Achieve that tracks gun incidences in America. Thirdly, we leveraged the US Census Bureau information and lastly, a state policy database by Ruger and Sorens that houses US laws and policies.

What can data tell us about gun violence?

Race distribution
correlation of mass
shootings

Age & Gender analysis
of Victims & Suspects

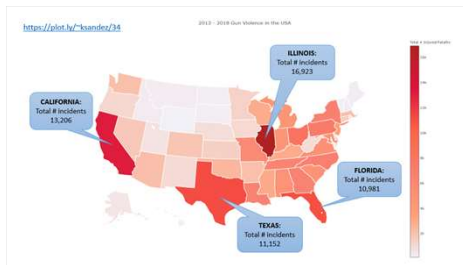

Increase or decrease of
gun violence rates

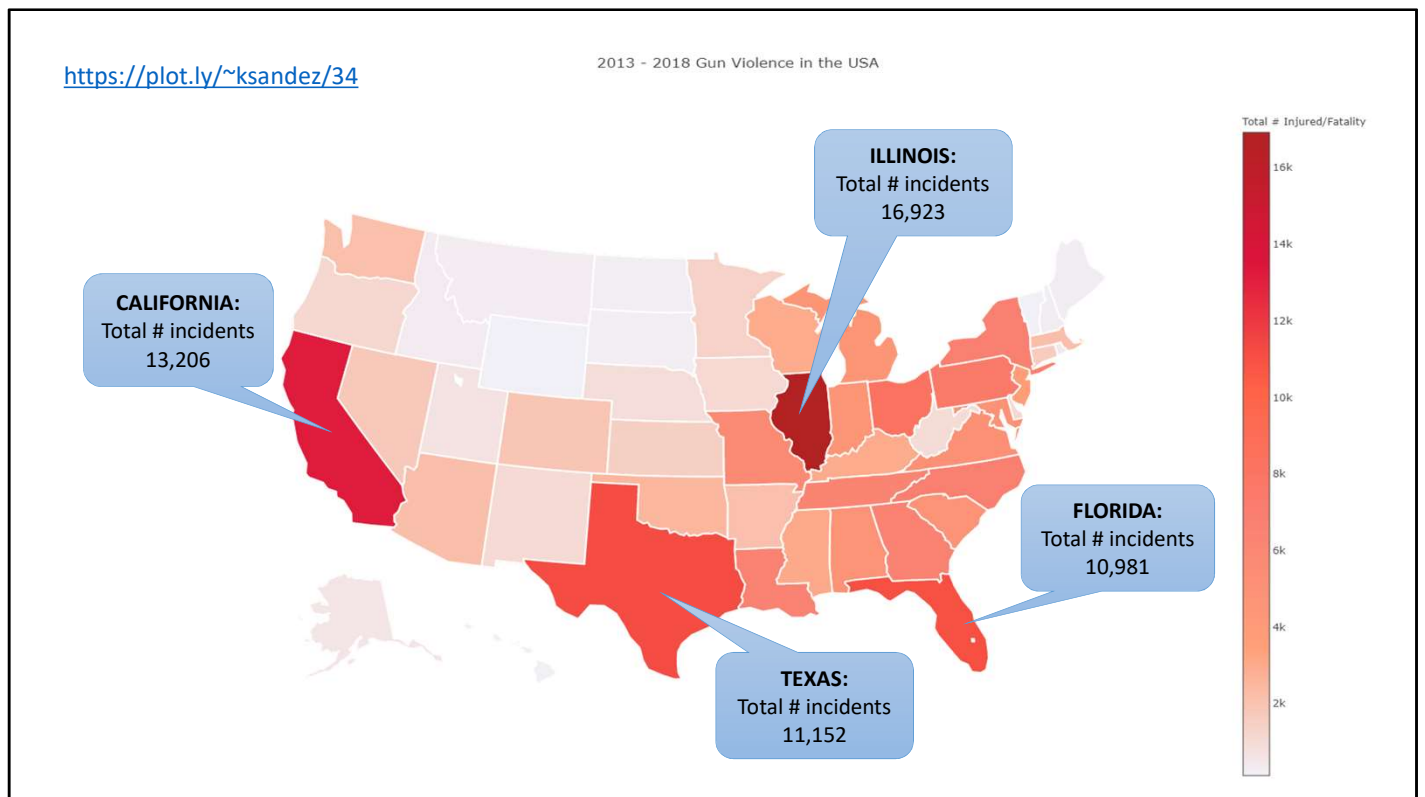

Effectiveness of gun
control laws

From these 4 sources, what can data tell us about gun violence and to start, I had questions relating to whether there is a race distribution correlation to mass shootings.

What can data tell us about gun violence?

Race distribution correlation of mass shootings

In this illustration, mapped are all gun violence incidents from 2013 to the end of March of this year. I wanted to see as a choropleth in what parts of the nation is there more prevalence of this type of violence. In order to do this map, I went thru the massive dataset which contained 240 thousand rows and getting the state abbreviated. From there, getting the count in 51 states which included Washington DC and then utilizing the plotly program to get an interactive map.

url: <https://plot.ly/~ksandez/34>

Next with pie charts I wanted to see the correlation of race distribution of the states in comparison to the identified race of the shooter in mass shootings. Mass shooting is defined by the FBI incidents where 4 or more were killed including the perpetrator.

What can data tell us about gun violence?

Race distribution
correlation of mass
shootings

Age & Gender analysis
of Victims & Suspects

Increase or decrease of
gun violence rates

Effectiveness of gun
control laws

What can data tell us about gun violence?

Age & Gender analysis of Victims & Suspects

• 2014-2018 Average Age of Victims vs Suspects

• 2014-2018 Count of Genders of Victims vs Suspects

1. Is there correlation to the age and gender of the victims and the suspects

- 2014-2018 Average Age of Victims vs Suspects

2014-2018 Average Age of Victims vs Suspects url:

What can data tell us about gun violence?

Race distribution
correlation of mass
shootings

Age & Gender analysis
of Victims & Suspects

Increase or decrease of
gun violence rates

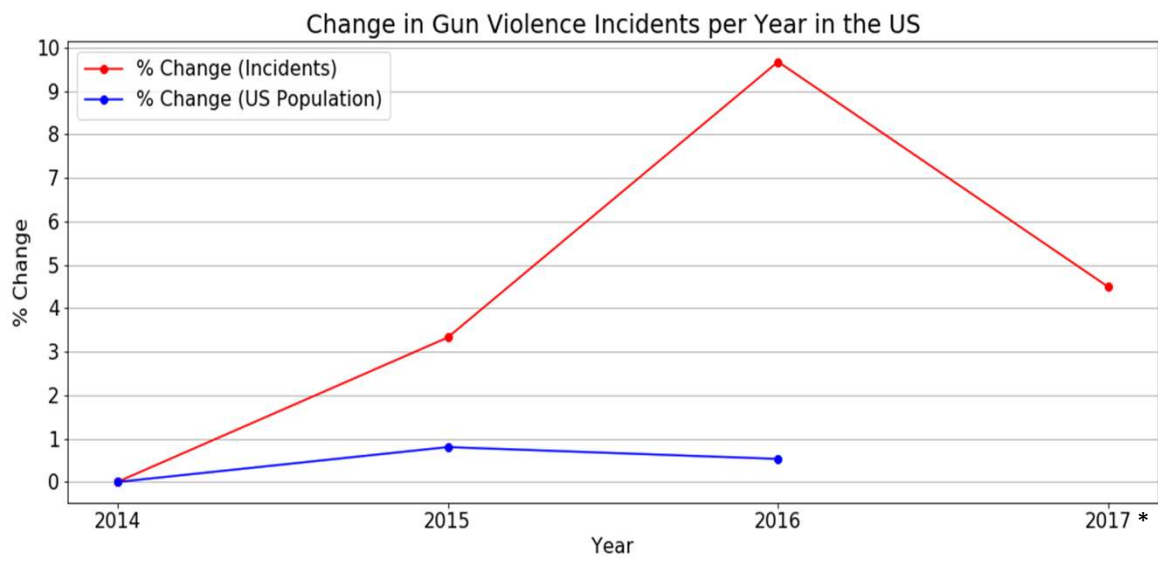

Effectiveness of gun
control laws

What can data tell us about gun violence?

Increase or decrease of
gun violence rates

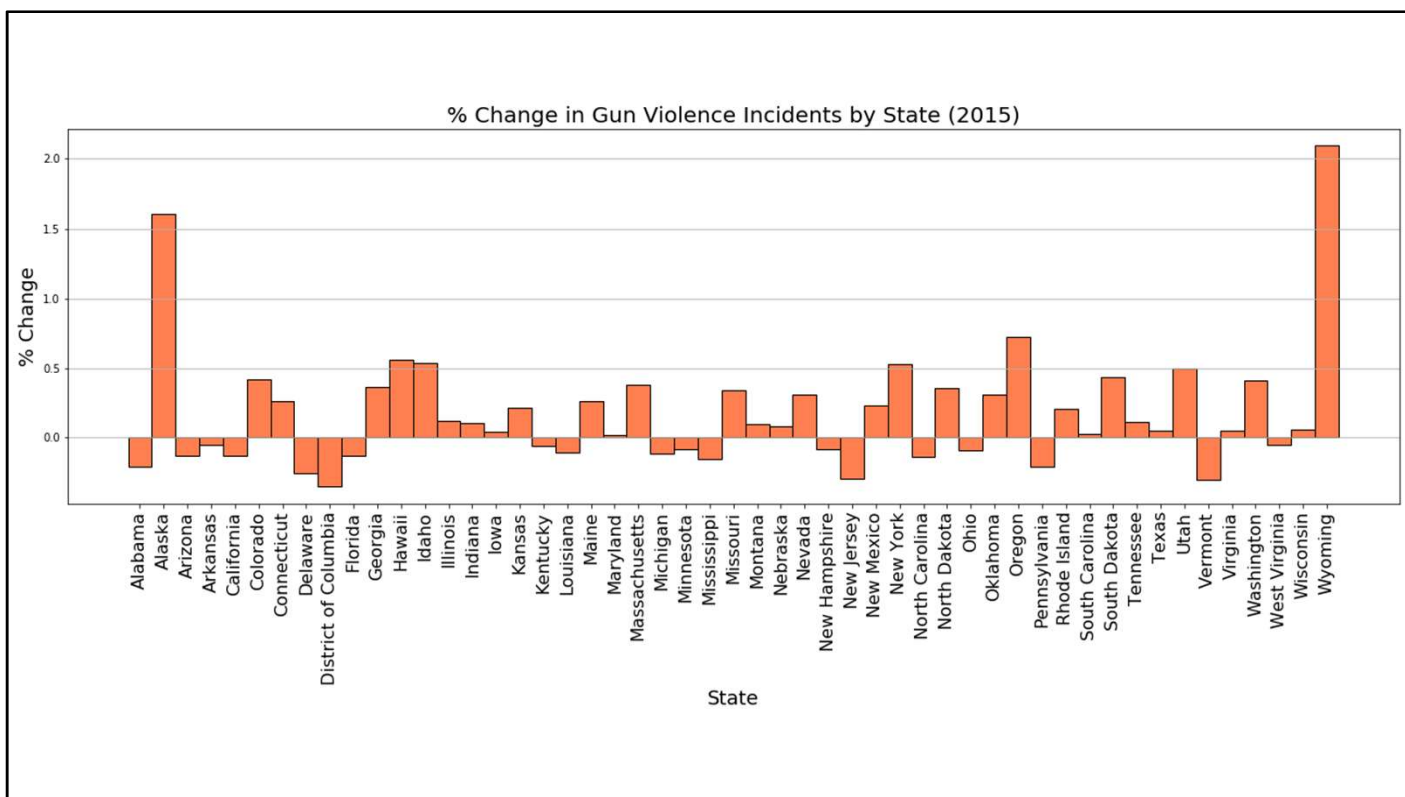

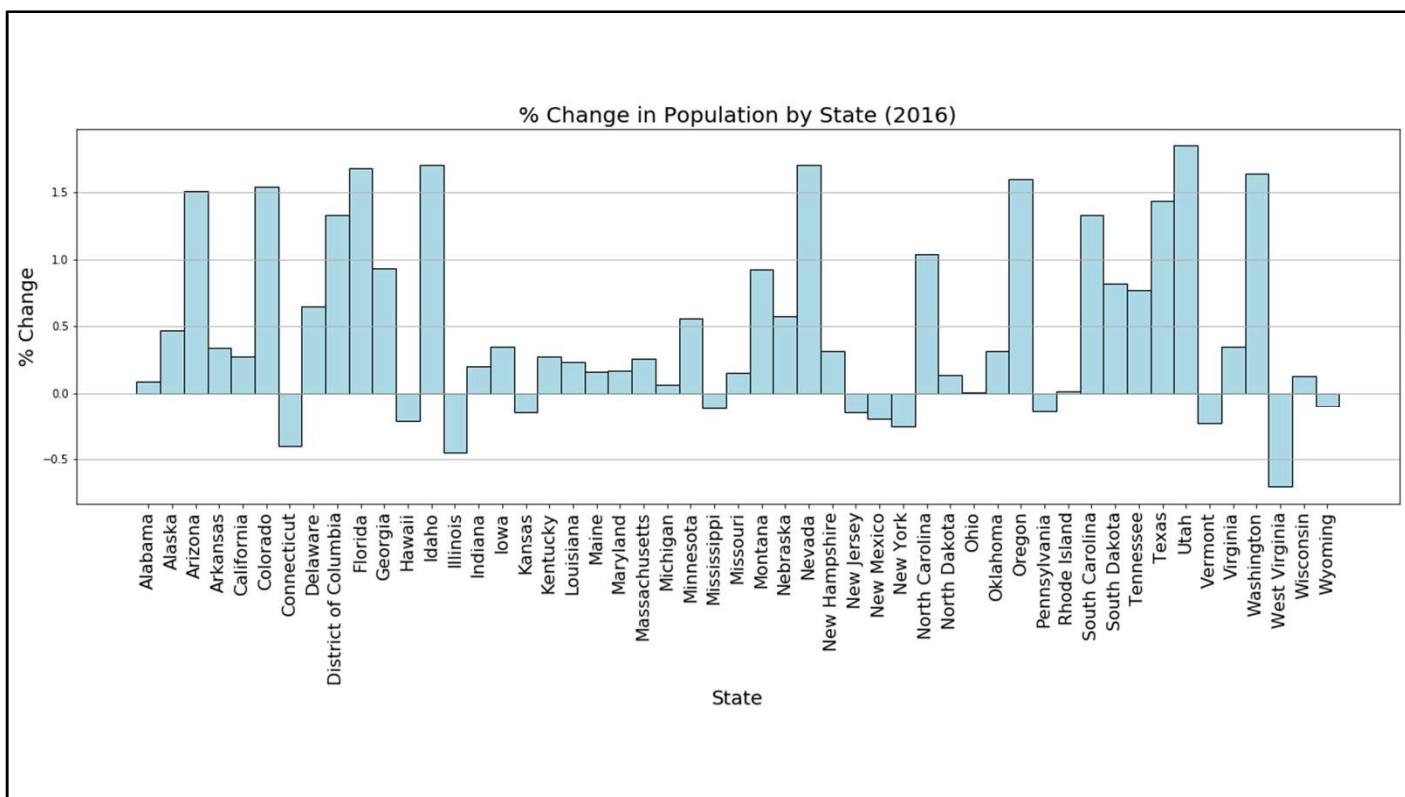

1. Does gun violence go +/- year over year compared to the population per 100k ppl
2. Is gun violence getting out of control as portrayed by the media?
3. Is there a time when gun violence happens more often?

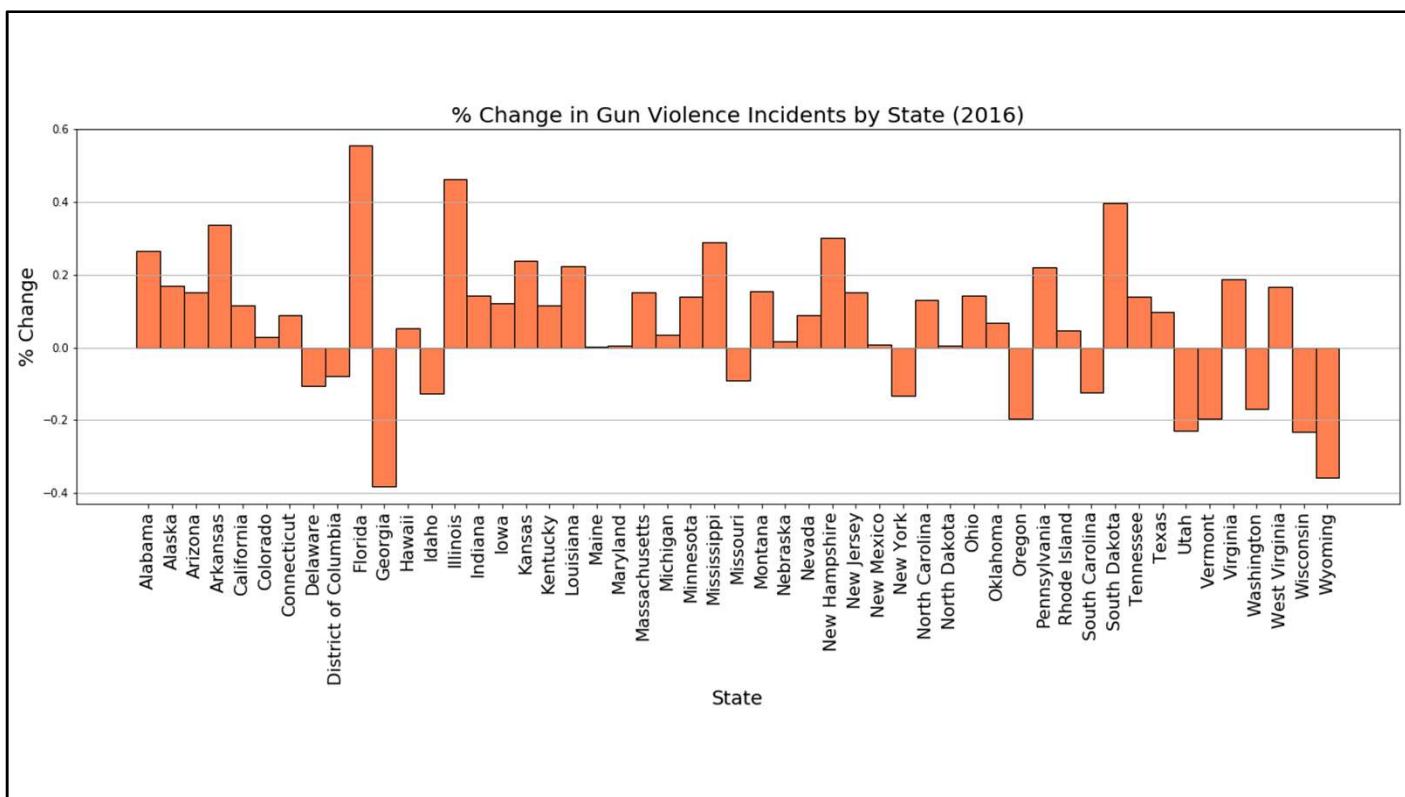

* The Census Bureau has yet to release 2017 population data

What can data tell us about gun violence?

Race distribution
correlation of mass
shootings

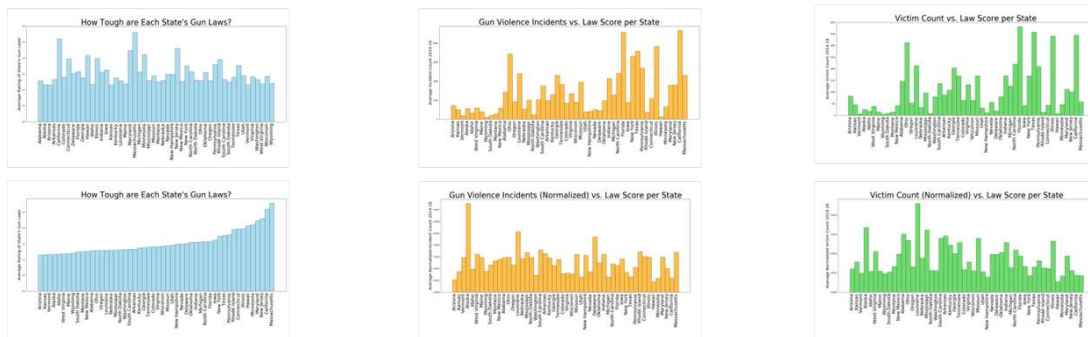

Age & Gender analysis
of Victims & Suspects

Increase or decrease of
gun violence rates

Effectiveness of gun
control laws

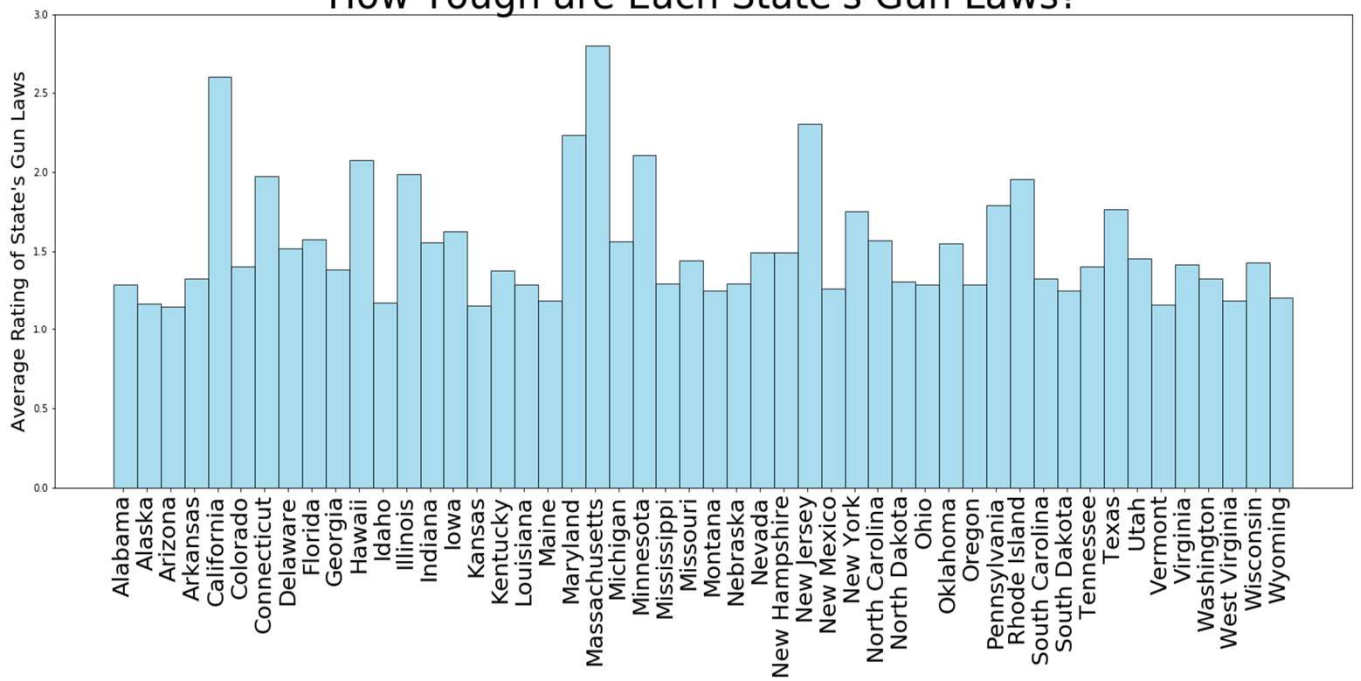

What can data tell us about gun violence?

Effectiveness of gun control laws

1. Gun Violence Law rating per state
2. Gun violence law rating per state vs total incidents per state averaged from 2014-16
3. Gun violence law rating per state vs total incidents per state averaged from 2014-16 normalized against total population
4. Gun violence law rating per state vs total victims per state averaged from 2014-16 normalized against total population

How Tough are Each State's Gun Laws?
